

EXPERIMENT 07

Integrating a Zoho Creator Application with Another Zoho Service Using Connections and APIs

Hotel Room Booking & Front Office Management

Aim

To integrate the Hotel Room Booking & Front Office Management application built in Zoho Creator with Zoho Calendar by creating an authorized connection and using a Deluge script to call the Zoho Calendar service.

The integration automatically creates a calendar event when a guest successfully submits a room booking form, reducing the need for front-office staff to manually enter booking schedules into the calendar.

Procedure

Step 1: Open Microservices

From the **Develop** section of the Zoho Creator application, the **Microservices** page was opened and **Create New** was selected.

Step 2: Choose Connections

From the Create New Microservice options, **Connections** was selected to connect the Zoho Creator application with the Zoho Calendar service.

Step 3: Configure Zoho Calendar Connection

A new connection for **Zoho Calendar** was created. The connection name was configured and the required authorization and access permissions were selected.

Step 4: Authorize the Connection

Zoho Creator requested permission to access Zoho Calendar. The required permissions were reviewed and the connection was authorized.

Step 5: Enable Connection for the Application

The created Zoho Calendar connection was enabled for the **Hotel Room Booking & Front Office Management** application so that it could be used in Deluge scripts.

Step 6: Create the Workflow

A new workflow was created for the **Room_Booking_Form**.

The workflow was configured to trigger when a new record is created after a **successful form submission**.

Step 7: Write the Deluge Script

A Deluge script was added to the workflow to connect with Zoho Calendar and create a calendar event using the submitted booking information.

The script uses the guest name, room type, number of guests, check-in date, and preferred check-in time to create the calendar event.

Step 8: Save and Test the Workflow

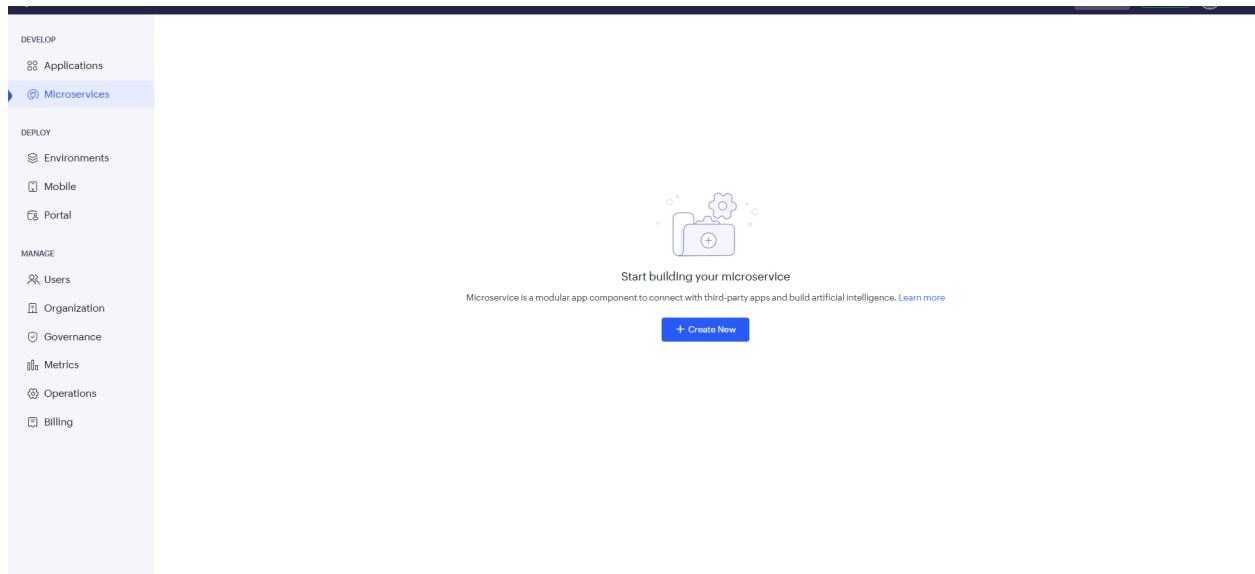

The Deluge script and workflow were saved. A sample room booking was submitted through the live form to test the integration.

The Zoho Calendar was then checked to verify that the booking event was created successfully.

Output

3.1 Opening the Microservices Section

The **Microservices** section was opened from the Develop menu in Zoho Creator. The Create New option was used to create a new service connection.

3.2 Choosing the Connections Microservice

The **Connections** option was selected from the available microservice types to establish communication between the Zoho Creator application and Zoho Calendar.

Create New Microservice

	AI Models Add AI capabilities to your apps	Create
	AR Library Add and manage AR sets	Create
	Connections Connect apps with third-party services	Pick & Create
	Datasources Manage third party modules in Creator	Create
	Custom API Create your own APIs and define specific actions.	Create

3.3 Creating the Zoho Calendar Connection

A Zoho Calendar connection was created by providing the required connection details and selecting the necessary permissions.

 Zoho Calendar - Add Connection

By creating a Zoho Calendar connection, you authorize Zoho Creator to exchange data with Zoho Calendar in accordance with applicable data protection and compliance requirements. Data handling is governed by Zoho Calendar Terms of Service and Privacy Policy. [Learn more](#)

3.4 Authorizing Zoho Calendar

The connection was authorized by granting Zoho Creator the required permissions to access and create events in Zoho Calendar.

Creator

Published by Zoho

Creator would like to access the following information.

Calendar

- Add new calendar details
- Add event
- To get calendar details
- To get event details
- To get freebusy for the user
- To get events list based on search criteria
- Update calendar details
- Update event

I allow Creator to access the above data from my Zoho account.

Accept

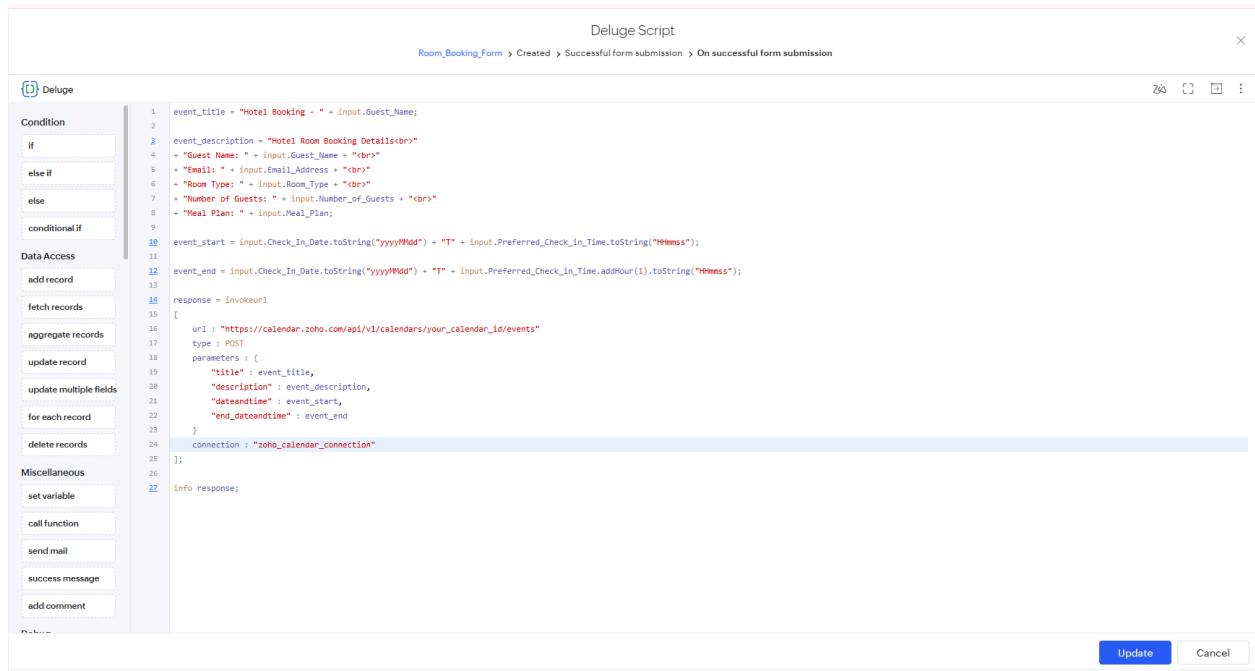

Reject

3.5 Connection Details and Access

The created Zoho Calendar connection was enabled for the **Hotel Room Booking & Front Office Management** application. The connection provides the required permissions for creating calendar events.

3.7 Deluge Script Calling Zoho Calendar

A Deluge script was added to the workflow to communicate with Zoho Calendar. The script retrieves the booking details from the submitted form and uses the Zoho Calendar connection to create a corresponding calendar event.

Final Result

The **Hotel Room Booking & Front Office Management** application was successfully integrated with **Zoho Calendar** using a connection and Deluge scripting.

When a guest submits the room booking form successfully, the workflow automatically sends the booking information to Zoho Calendar and creates a corresponding calendar event.

The integration was tested with a sample booking and the event was successfully created in Zoho Calendar. Thus, the objective of integrating a Zoho Creator application with another Zoho service using **Connections, APIs, and Deluge scripting** was achieved.
