Experiment 11
Deployment of Zoho Creator Application from Development to Stage and Production

Pavitha M
241401063

Aim

To deploy the Hotel Room Booking & Front Office Management application in Zoho Creator from the Development environment to the Stage environment for testing and then to the Production environment for live use.

Procedure

1. Open Zoho Creator and select the Hotel Room Booking & Front Office Management application.

2. Open the Room_Booking_Form and make a small modification, such as adding an instruction asking users to verify their booking details before submitting the form. Save the changes.

3. Navigate to the Deploy menu and select Environments to view the available deployment environments and changes.

4. Select Publish to Stage to begin deploying the modified application to the Stage environment.

5. Select the required modified components and compare the changes before publishing.

6. Enter the deployment details, including the title, description, version type, and email notification details, if requested.

7. Click the appropriate Publish or Deploy option to deploy the selected components to the Stage environment.

8. Verify that the deployment is completed successfully. Open the Stage application and test the form to ensure that it works correctly.

241401063

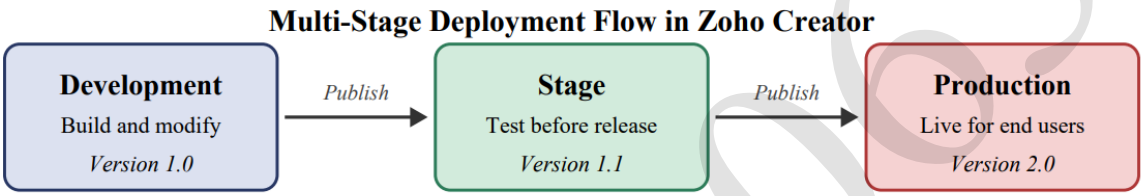

9. After successful testing, navigate to the deployment section and select Publish to Production, if available.

10. Review the selected components and confirm the production deployment.

11. Verify the deployment status and check whether the application is available in the Production environment.

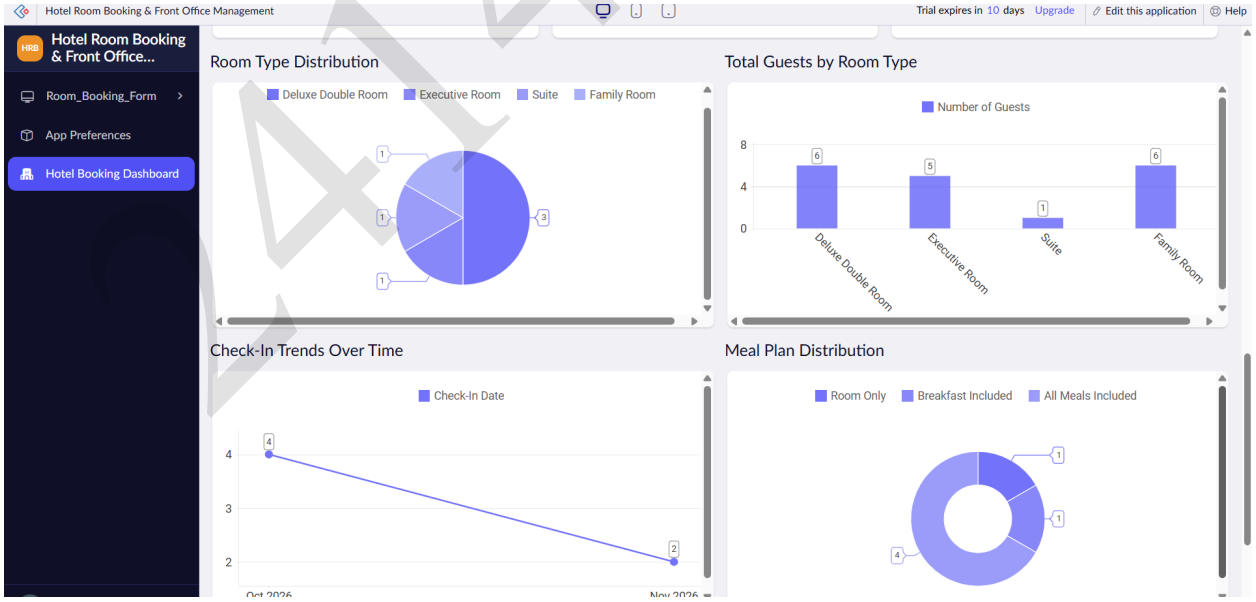

OUTPUT

3.1 Multi-stage deployment model

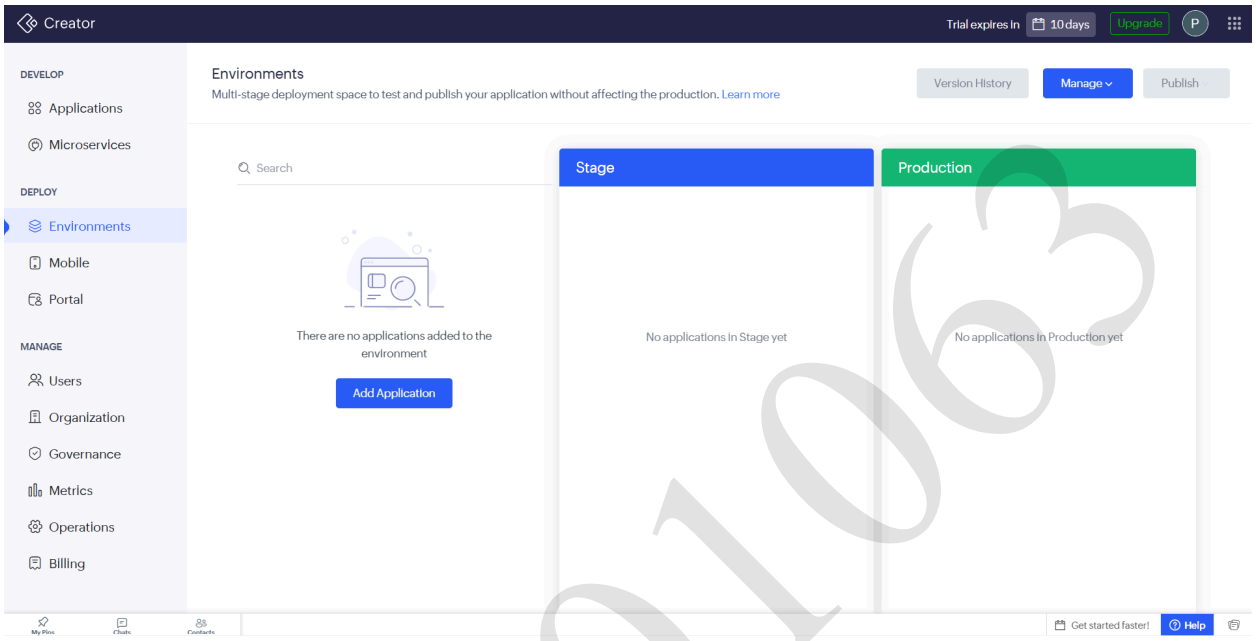

Zoho Creator provides three environments. Development is where the application is built, Stage is a testing copy, and Production is the live copy used by end users. A change is published to one environment at a time, so untested work never reaches live users.

3.2 Application overview (Development dashboard)

3.3 Environments page

The Environments page lists the application with Stage and Production columns. Both initially held version 1.0 (Oct 06, 2026), and the label Changes available showed that Development had changes ready to publish.

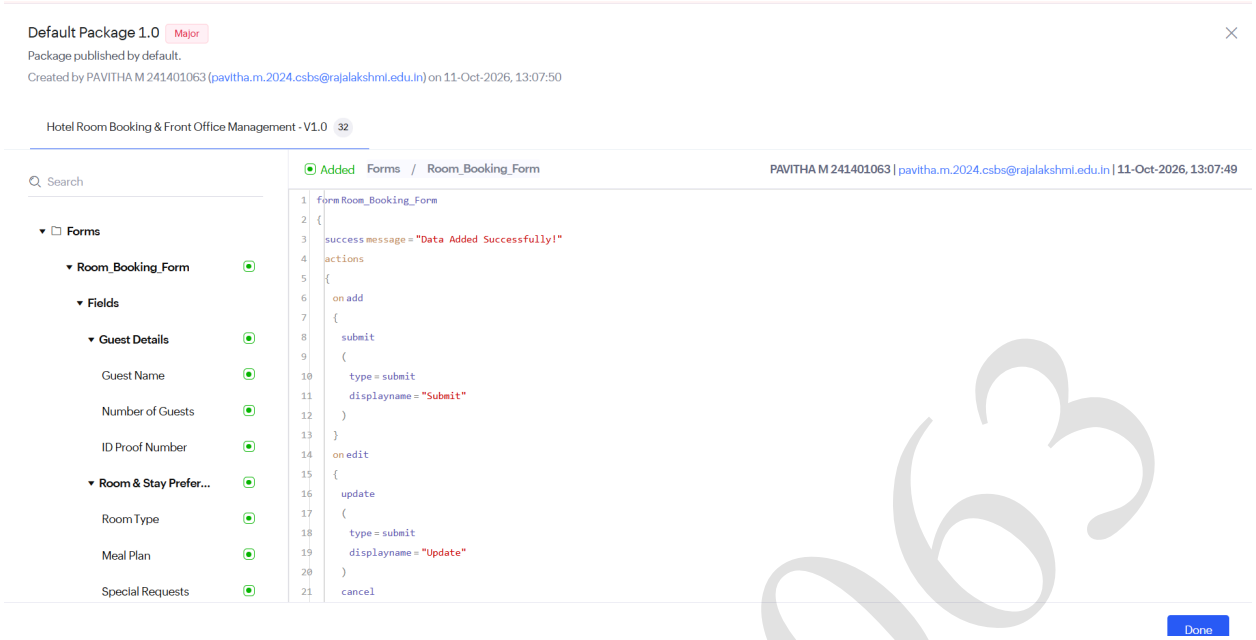

3.4 Selecting Components and Comparing Versions

In the Publish to Stage window, the required components from the Hotel Room Booking & Front Office Management application were selected for deployment. The code view displays the Development and Staging versions side by side to compare the changes made to each modified component.

The selected components include Guest Name, Email Address, Permanent Address, Contact Number, and ID Proof Number from Guest Details; Number of Guests, Room Type, and Meal Plan from Booking Details; and Check-In Date and Preferred Check-in Time from Scheduling Details.

The selected components were reviewed to identify the changes before publishing the application to the Stage environment for testing.

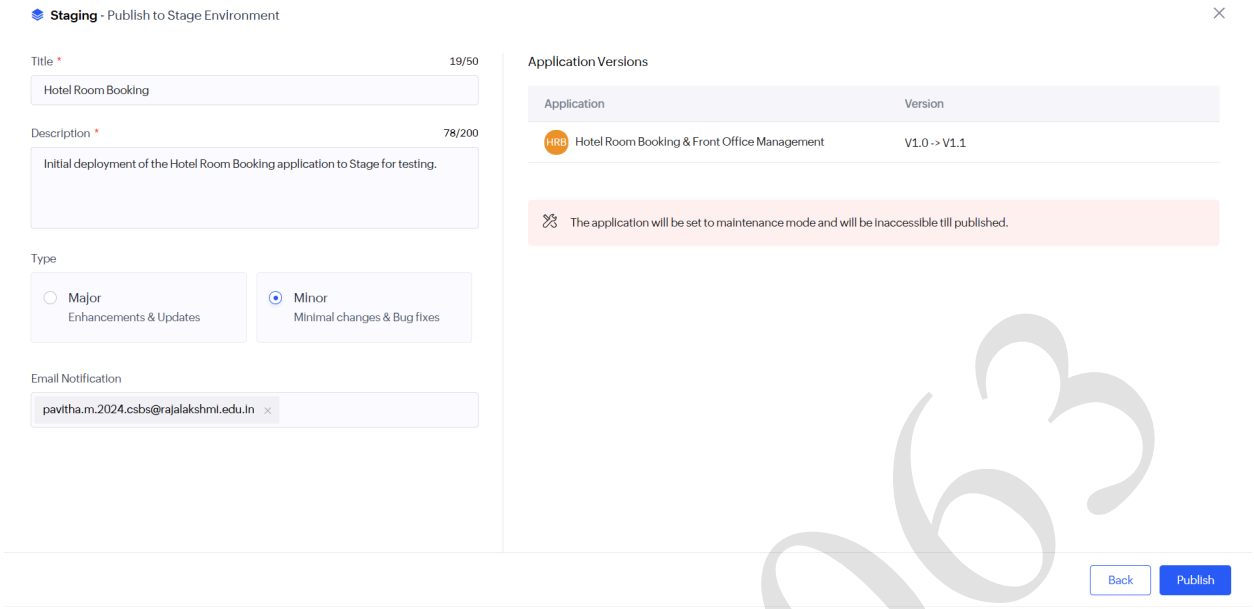

24140106

3.5 Publish Details

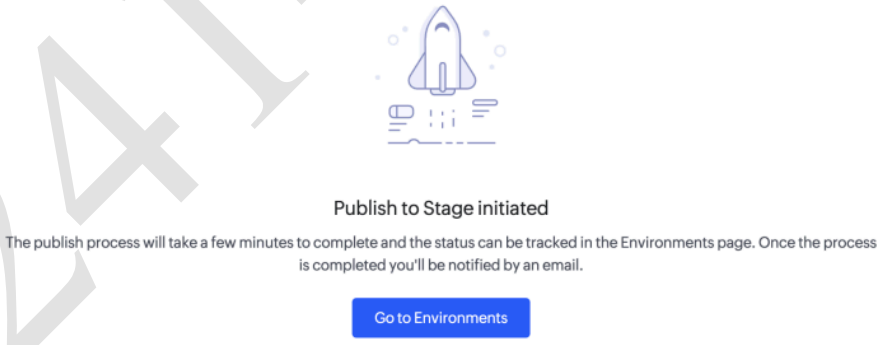

The deployment title was entered as Hotel Room Booking & Front Office Management – Initial, with the description “Initial deployment of the Hotel Room Booking & Front Office Management application from Development to Stage for testing.” The deployment type was set to Minor, if available, to represent minimal changes and bug fixes. Email notification details were provided to receive deployment updates, and the version number was noted as displayed by Zoho Creator. A warning was displayed indicating that the application might be in maintenance mode and temporarily inaccessible until publishing was completed.

241401063

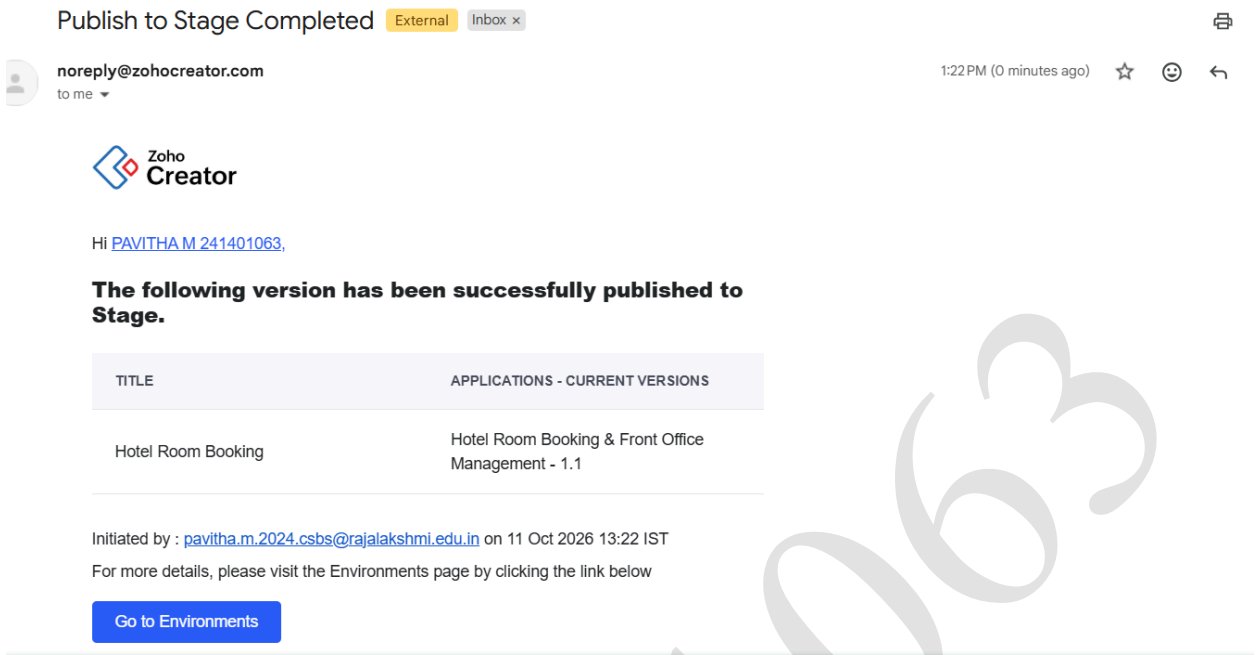

3.6 Stage deployment confirmation

After clicking Publish, Zoho Creator displayed “Publish to Stage initiated” and noted that the process takes a few minutes. A “Publish to Stage Completed” email from noreply@zohocreator.com confirmed that the version was published successfully with current version 1.1, initiated on 07 Oct 2026 at 22:03 IST.

Zoho Creator

Hi PAVITHA M 241401063,

The following version has been successfully published to Stage.

TITLE	APPLICATIONS - CURRENT VERSIONS
Hotel Room Booking	Hotel Room Booking & Front Office Management - 1.1

Initiated by : pavitha.m.2024.csbs@rajalakshmi.edu.in on 11 Oct 2026 13:22 IST

For more details, please visit the Environments page by clicking the link below

Go to Environments

3.8 Deployment Summary

Environment	Version	Date	Status	Description
Development	1.0	Oct 06, 2026	Deployed	Application configured and ready for deployment
Stage	1.1	Oct 07, 2026	Deployed	Application tested and approved in Stage
Production	2.0	Oct 07, 2026	Live	Application live and accessible to end users

3.9 Deployment practices followed

The deployment followed good release practice: components were reviewed and the Development and Staging code compared before publishing; the version was tested in Stage before Production; each release carried a clear title, description and version type; email notification was enabled and received; the maintenance-mode warning was noted; and the Live status and Deployment Progress panel were checked after publishing.

4. Final Result

The Hotel Room Booking & Front Office Management application was deployed through the Zoho Creator multi-stage process. The selected hotel booking form components were reviewed and published from Development to Stage as a Minor release. After testing, the application was published to Production, where the Environments page displayed its deployment status.

The exercise met its objective of deploying a Zoho Creator application from the Development environment to the Production environment using controlled and traceable steps.
