

## EXPERIMENT 06

### Automating Business Processes Using Deluge Scripting and Workflows, with Application Testing and Debugging

Hotel Room Booking & Front Office Management

**Pavitha M**  
241401063

## Aim

To automate the hotel room booking process by sending a confirmation email automatically when a guest successfully submits the **Room Booking Form**, using a Zoho Creator workflow and Deluge script.

The automation eliminates the need for front-office staff to manually send confirmation emails and ensures that every valid booking request is acknowledged immediately.

## Procedure

### Step 1: Create a Workflow

A new workflow was created for the **Room\_Booking\_Form** from the Workflow section of the Zoho Creator application.

### Step 2: Configure the Trigger

The Record Event was set to **Created or Edited** and the Form Event was set to **Successful form submission** so that the workflow runs after a valid form submission.

### Step 3: Name the Workflow

The workflow was named **Send Hotel Booking Confirmation Email** and saved.

### Step 4: Add a Deluge Action

A new action was added to the workflow. The action type was selected as **Deluge Script** so that a customized confirmation email could be generated using the submitted form data.

### Step 5: Write the Deluge Script

A Deluge `sendmail` script was written to send an email to the guest's email address. The email contains dynamic information such as:

- Number of Guests
- Room Type
- Meal Plan
- Check-In Date
- Preferred Check-in Time

The values are retrieved directly from the submitted form fields.

### **Step 6: Save the Workflow**

The Deluge script was saved and the workflow was reviewed to ensure that the script was attached to the **Successful form submission** event.

### **Step 7: Test the Application**

A sample hotel room booking was submitted through the live form using valid guest details, room preferences, check-in date, and other required information.

### **Step 8: Debug and Verify**

The guest's email inbox was checked after submission. The confirmation email was received with the correct booking details, confirming that the workflow and Deluge script executed successfully.

## **Output**

### **1. Creating the Workflow**

The workflow was created for the **Room\_Booking\_Form** with the trigger set to **Successful form submission**.

## Run workflow on any event in the form

Choose form Room\_Booking\_Form

Run when a record is  
(Record Event) ☒ Created ☐ Edited ☐ Created or Edited ☐ Deleted

When to trigger workflow  
(Form Event) Successful form submission

Name the workflow On successful form submission

[Create Workflow](#)

## 2. Choosing the Action

The **Deluge Script** action was selected to generate and send a customized confirmation email using the submitted booking details.

[Add New Action](#)

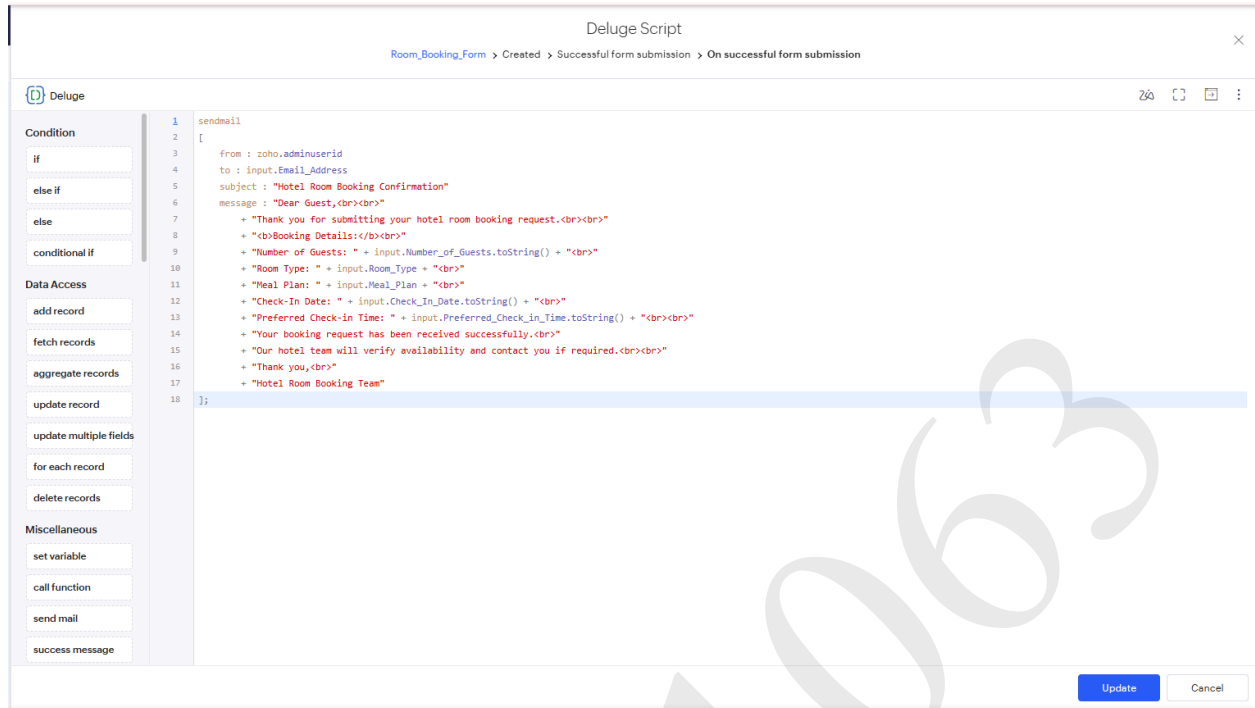

Run this action ☒ Always ☐ on condition

Action type:

|                                                                                                                                                |                                                                                                                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
|  Notification<br>Notify through email, SMS, Redirect to URL |  Data access<br>Add, update records in another form               |
|  Integrations<br>Push submitted data to another service     |  Deluge script<br>Write script in events like on load, on success |

## 3. Writing the Deluge Script

The [sendmail](#) script was configured with the guest's email address and dynamic booking information from the form.

## 4. Testing the Booking Form

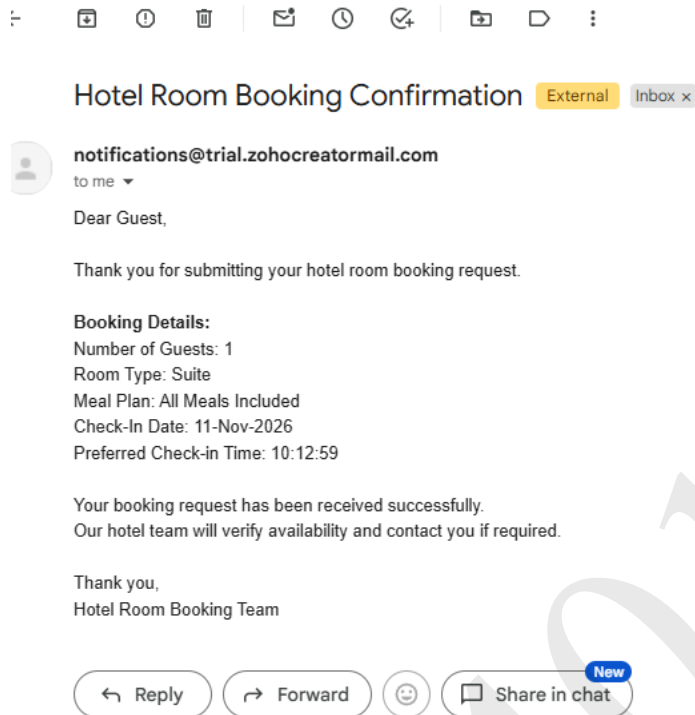

A sample room booking was submitted successfully through the live form to trigger the workflow.

The screenshot displays the "Room\_Booking\_Form" with the following sections and fields:

- Guest Details**
  - Guest Name \* (First Name: Hema, Last Name: )
  - ID Proof Number \*
  - Number of Guests \* (#####)
- Contact Details**
  - Email Address
  - Contact Number \* (+91 81234 56789)
  - Permanent Address
    - Address Line 1
    - Address Line 2
    - City / District, State / Province, Postal Code, Country (Country dropdown)
- Room & Stay Preferences**

## 5. Confirmation Email

The confirmation email was received successfully with the submitted booking details, demonstrating that the automation worked correctly.

## Final Result

A complete workflow was successfully implemented for the **Hotel Room Booking & Front Office Management** application. The workflow automatically sends a personalized confirmation email whenever a guest successfully submits the room booking form.

The application was tested using a live form submission, and the email was received with the correct dynamic booking details. Thus, the hotel booking notification process was successfully automated using **Zoho Creator Workflows and Deluge scripting**.
